

Company Identifiers

Company Identifiers

This table gives a unique numeric identifier for each member company. It has three uses:

- the LMP_CompID
- the TCS Company ID
- the Device ID Vendor ID

The purpose of a common table is to ensure that, although not all companies may initially use all types of entry, the value will be reserved, so it can be used in all cases later, should a company need it.

A "Y" in the table below indicates that the company is using that implementation of the ID.

Note that the LMP uses little endian representation when sending this number while the TCS uses big endian. However, this is not relevant to the assignment.
