IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied **“AS IS.”**

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Note: Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

The IEEE and its designees are the sole entities that may authorize the use of the IEEE-owned certification marks and/or trademarks to indicate compliance with the materials set forth herein. IEEE grants permission to print hard copies of the forms in this document for purposes of documentation.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Introduction

(This introduction is not part of IEEE Std 802.16/Conformance01-2003, IEEE Standard for Conformance to IEEE 802.16— Part 1: Protocol Implementation Conformance Statement (PICS) Proforma for 10–66 GHz WirelessMAN-SC Air Interface.)

This is the first of a set of standards specifying test methods for demonstrating conformance to IEEE Standard 802.16. It represents the Protocol Implementation Conformance Statement (PICS) Proforma for conformance specification of base stations and subscriber stations based upon the WirelessMAN-SC (10–66 GHz) air interface specified in IEEE Standard 802.16. The work was developed within the IEEE 802.16 Working Group beginning from August 2002 to April 2003.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Conformance test methodology

The multipart conformance test documents for IEEE Standard 802.16 are identified by “IEEE Standard 802.16/ConformanceXX”. For example, the first part of the conformance specification for IEEE 802.16 is designated “IEEE Standard 802.16/Conformance01”.

IEEE Standard for Conformance to IEEE 802.16TM

Part 1: Protocol Implementation Conformance Statement (PICS) Proforma for 10–66 GHz WirelessMAN-SCTM Air Interface

1. Overview

This document is Part 1 of a multi-part deliverable addressing conformance to the WirelessMAN-SC air interface in IEEE 802.16TM:^{1,2}

- Part 1: Protocol Implementation Conformance Statement (PICS) proforma
- Part 2: Test Suite Structure and Test Purposes (TSS&TP) specification
- Part 3: Radio Conformance Test (RCT) specification
- Part 4: Abstract Test Suite (ATS) specification

1.1 Introduction

To evaluate conformance of a particular implementation, it is necessary to have a statement of which capabilities and options have been implemented for a telecommunications specification. Such a statement is called a protocol Implementation Conformance Statement (ICS).

1.2 Scope

This standard represents the Protocol Implementation Conformance Statement (PICS) Proforma, per ISO/IEC Standard 9646-7 (1995) and ITU-T X.296, for conformance specification of base stations and subscriber stations based upon the WirelessMAN-SC (10–66 GHz) air interface specified in IEEE 802.16.

1.3 Purpose

This document describes the capabilities and options within the WirelessMAN-SC (10–66 GHz) air interface specified in IEEE 802.16. It is to be completed by the supplier of a product claiming to implement the protocol. It indicates which capabilities and options have been implemented and what limitations might prevent interworking. It allows a customer of the product to evaluate its conformance and to determine whether the product meets the customer's requirements.

¹Information on references can be found in Clause 2.

²When IEEE 802.16 is referenced this generally includes the base document and any existing amendments and corrigenda.

2. References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document. References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific. For a specific reference, subsequent revisions do not apply. For a non-specific reference, the latest version applies.

3. Definitions and Abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply in conjunction with the terms defined in IEEE 802.16.

In particular, the following terms defined in ISO/IEC 9646-1:1994 apply:

Implementation Conformance Statement (ICS): statement made by the supplier of an implementation or system claimed to conform to a given specification, stating which capabilities have been implemented. The ICS can take several forms: protocol ICS, profile ICS, profile specific ICS, information object ICS, etc.

ICS proforma: document, in the form of a questionnaire, which when completed for an implementation or system becomes an ICS.

Protocol ICS (PICS): ICS for an implementation or system claimed to conform to a given protocol specification.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply in conjunction with the abbreviations defined in IEEE 802.16.

ATS	Abstract Test Suite
ICS	Implementation Conformance Statement
IUT	Implementation Under Test
PICS	Protocol Implementation Conformance Statement
RCT	Radio Conformance Test
SUT	System Under Test
TP	Test Purpose
TSS	Test Suite Structure

4. Conformance to this PICS Proforma Specification

If it claims to conform to the present document, the actual PICS proforma to be filled in by a supplier shall be technically equivalent to the text of the PICS proforma given in Annex A, and shall preserve the numbering, naming, and ordering of the proforma items.

A PICS which conforms to the present document shall be a conforming PICS proforma completed in accordance with the guidance for completion given in A.1.

Annex A

(normative)

Protocol ICS for IEEE 802.16 WirelessMAN-SC

A.1 Guidance for completing PICS Proforma⁶

A.1.1 Purposes and Structure

The purpose of this PICS proforma is to provide a mechanism whereby a supplier of an implementation of the requirements for WirelessMAN-SC defined in IEEE 802.16 may provide information about the implementation in a standardized manner.

The PICS proforma is subdivided into subclauses for the following categories of information:

- guidance for completing the PICS proforma
- identification and implementation
- identification of the standard
- global statement of conformance
- roles
- Subscriber Station (SS)
- Base Station (BS)

A.1.2 Abbreviations and Conventions

Item column

The Item column contains a number which identifies the item in the table.

Capability column

The capability column describes in free text each respective item (e.g., parameters, timers, etc.). It implicitly means “Is <capability> supported by the implementation?”

Reference column

The reference column indicates the clause(s) of IEEE 802.16 from which the requirement for the capability is derived.

⁶Copyright release for PICS proformas: Users of this standard may freely reproduce the PICS proforma in this annex so that it can be used for its intended purpose and may further publish the completed PICS.

Status column

The following notations, defined in ISO/IEC 9646-7:1995, are used in the status column:

m	Mandatory – the capability is required to be supported.
o	Optional – the capability may be supported or not.
n/a	Not applicable – in the given context, it is impossible to use the capability.
x	Prohibited (excluded) – there is a requirement not to use this capability in the given context.
o.i	Qualified option – for mutually exclusive or selectable options from a set. “i” is an integer which identifies a group of related optional items and the logic of their selection which is defined immediately following the table.
ci	Conditional – the requirement on the capability (“m”, “o”, “x”, or “n/a”) depends on the support of other optional or conditional items. “i” is an integer identifying a conditional status expression which is defined immediately following the table.
i	Irrelevant (out of scope) – capability outside the scope of the reference specification. No answer is requested from the supplier.

Support column

The support column shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 9646-7:1995, are used for the support column:

Y or y	Supported by implementation.
N or n	Not supported by implementation.
N/A, n/a or -	No answer required (allowed only if the status is n/a either directly or after the evaluation of a conditional status).

If this PICS proforma is completed in order to describe a multiple profile implementation, it may be necessary to answer that a capability is supported for one profile and not supported for another. In that case, the supplier shall enter a unique reference to a conditional expression, preceded by “?” (e.g., ?3). This expression shall be given in the space provided for comments at the bottom of the table. It uses the predicates defined in Table A.1, each of which refers to a single profile or a family of profiles and which takes the value TRUE if and only if that profile is to be used.

EXAMPLE: ?3: If profM1 THEN Y ELSE N

NOTE— As stated in ISO/IEC 9646-7:1995, support for a received protocol data unit (PDU) requires the ability to parse all valid parameters of that PDU. Supporting a PDU while having no ability to parse a valid parameter is non-conformant. Support for a parameter on a PDU means that the semantics of that parameter are supported.

Values column

The values column is only used when necessary in a table. It contains the type, the list, the range, or the length of values. The following notations are used:

Range of values: Example:	<min value>..<max value> 5..20
List of values: Example 1: Example 2: Example 3:	<value1>, <value2>, ..., <valueN> 2, 4, 6, 8, 9 1101b, 1011b, 1111b 0x0A, 0x34, 0x2F
List of named values: Example:	<name1>(<val1>), <name2>(<val2>), ..., <nameN>(<valN>) reject(1), accept(2)
Length: Example:	Size (<min size>..<max size>) Size (1..8)

Values supported column

The values supported column is only present when the values column is present. It shall be filled in by the supplier of the implementation. In this column, the value or the ranges of values supported by the implementation shall be indicated.

Reference to items

For each possible item answer in the support column within the PICS proforma a unique reference exists which may be used, for example, in conditional expressions. It is defined as the table identifier, followed by the “/” character, followed by the item number in the table. If there is more than one support column in a table, the columns are discriminated by letters (a, b, etc.).

Example:	A5/4 is the reference to the answer of item 4 in Table A5.
Example:	A6/3b is the reference to the second answer (i.e., in the second support column) of item 3 in Table A6.

Prerequisite Line

A prerequisite line takes the form:

Prerequisite: <predicate>

A prerequisite line after a clause or table title indicates that the entire clause or the entire table is not required to be completed if the predicate is FALSE.

A.1.3 Instructions for Completing the PICS Proforma

The supplier of the implementation shall complete the PICS proforma in each of the spaces provided. In particular, an explicit answer shall be entered, in the support or values supported column boxes provided, using the notation described in A.1.2.

However, tables contained in A.5 shall only be completed for SS implementations, and tables contained in A.6 shall only be filled in for BS implementations.

If necessary, the supplier may provide additional comments in the space at the bottom of the tables or separately.

A.2 Identification of the Implementation

Identification of the Implementation Under Test (IUT) and the system in which it resides (the System Under Test (SUT)) should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the PICS should be named as the contact person.

A.2.7 Identification of the Standard

This PICS proforma applies to IEEE 802.16 WirelessMAN-SC.

A.2.8 Profiles

Clause 12 of IEEE 802.16 defines system profiles. There are separate profiles for the MAC and the PHY layers. The profiles that are defined are:

- Basic ATM MAC profile
- Basic packet MAC profile
- US 25 MHz channel PHY profile
- European 28 MHz channel PHY profile

A.1 defines the profile reference identifiers for use in this PICS proforma.

Table A.1—Profile Definitions

Identifier	Description	Status	Support
profM1	Basic ATM MAC profile	o.1	
profM2	Basic packet MAC profile	o.1	
profP1	US 25 MHz channel PHY profile	o.2	
profP1f	US 25 MHz channel PHY profile - FDD	c1	
profP1t	US 25 MHz channel PHY profile - TDD	c1	
profP2	European 28 MHz channel PHY profile	o.2	
ProfP2f	European 28 MHz channel PHY profile - FDD	c2	
profP2t	European 28 MHz channel PHY profile - TDD	c2	

o.1: It is mandatory to support at least one of these items.

o.2: It is mandatory to support at least one of these items.

c1: If profP1 then it is mandatory to support at least one of these items.

c2: If profP2 then it is mandatory to support at least one of these items.

A.3 Global Statement of Conformance

Are all mandatory capabilities implemented? (Yes_/No_)

NOTE—Answering “No” to this question indicates non-conformance to IEEE 802.16 WirelessMAN-SC. Non-supported mandatory capabilities are to be identified in the PICS, with an explanation of why the implementation is non-conforming, on pages attached to the PICS proforma.

A.4 Roles

A.2 defines the roles of an IUT.

Table A.2—Roles

Item	Role	Status	Support
1	Subscriber Station (SS)	o.1	
2	Base Station (BS)	o.1	

o.1: It is mandatory to support at least one of these items.

A.5 Subscriber Station

Prerequisite: A.2/1

This subclause contains the PICS proforma tables related to the SS. They shall be completed for description of SS implementations only.

A.5.1 Major SS Capabilities and Functionalities of the MAC

A.5.1.1 Convergence Sublayers

This subclause covers the requirements in Clause 5 of IEEE 802.16.

A.5.1.1.1 ATM Convergence Sublayer

This subclause covers the requirements of 5.1 of IEEE 802.16.

Item	Capability	Reference	Status	Support
1	Classification based on 802.1D™ Priority Range	11.4.9.3	o.1	
2	Classification based on 802.1Q VLAN ID	11.4.9.3	o.1	

o.1: At least one of these must be supported

A.5.1.2 Addressing and Connections

This subclause covers the requirements of 6.2.1 of IEEE 802.16.

Table A.9—Addressing and Connections

Item	Capability	Reference	Status	Support
1	Globally Unique SS MAC Address	6.2.1	m	
2	MAC Management messages only on applicable CIDs	6.2.1	m	
3	TFTP during initialization on the secondary management connection	6.2.1	m	
4	DHCP for SS IP address establishment and maintenance on the secondary management connection	6.2.1	m	
5	Time protocol on secondary management connection	6.2.1	m	
6	User data only on transport connections	6.2.1	m	

A.5.1.3 Construction and Transmission of MAC PDUs

This subclause covers the requirements of 6.2.3 of IEEE 802.16.

A.5.1.3.1 Conventions

Table A.10—Transmission Conventions

Item	Capability	Reference	Status	Support
1	Transmit messages most significant byte first	6.2.3.1	m	
2	Transmit bytes most significant bit first	6.2.3.1	m	

A.5.1.3.2 PDU Concatenation

Table A.11—PDU Concatenation

Item	Capability	Reference	Status	Support
1	Concatenate Multiple MAC PDUs into a single burst of the length commanded by the UL-MAP	6.2.3.2	m	
2	Receive concatenated MAC PDUs and determine disposition via CID	6.2.3.2	m	

A.5.1.3.3 SDU Fragmentation**Table A.12—SDU Fragmentation**

Item	Capability	Reference	Status	Support
1	Fragment a MAC SDU into multiple MAC PDUs	6.2.3.3	m	
2	Correctly set the FC bits	6.2.3.3	m	
3	Increment the FSN modulo 8	6.2.3.3	m	
4	Receive and reassemble fragmented SDUs	6.2.3.3	m	
5	Discard SDUs corrupted due to loss of fragment	6.2.3.3	m	
6	Fragmentation of PDUs on Basic and Initial Ranging connections	6.2.2.3	x	
7	Refrain from fragmenting on connections with fragmentation turned off	6.2.3.3, 6.2.3.4.1, 11.4.8.12	m	

A.5.1.3.4 Packing**Table A.13—Packing**

Item	Capability	Reference	Status	Support
1	Pack Fixed length PDUs	6.2.3.4.1	c2	
2	Receive (unpack) fixed length PDUs	6.2.3.4.1	c1	
3	Pack variable length PDUs	6.2.3.4.2	o

2	Check CRC of MAC PDUs received on connection with CRC enabled and discard any MAC PDU that fails check	6.2.3.5	c1	

c1: if A14/1 then m else i

A.5.1.4 Uplink Scheduling Service

This subclause covers the requirements of 6.2.5 of IEEE 802.16.

Table A.15— Uplink Scheduling Service

Item	Capability	Reference	Status	Support
1	Support of UGS	6.2.5.1	o.1	
2	Support of rtPS	6.2.5.2	o.1	
3	Support of nrtPS	6.2.5.3	o.1	
4	Support of BE	6.2.5.4	o.1	
5	Refrain from issuing bandwidth requests for UGS connections	6.2.5	c1	

o.1: Must support at least one of these options

Table A.18—Map Relevance – SS

Item	Capability	Reference	Status	Support
1	Processing delay for UL-MAP < 200us	6.2.7.6.1	m	
2	Capable of handling UL-MAP with offset up to 4096 minislots providing Allocation Start Time + Offset of Null IE ≤ 2ms	6.2.7.6.1	m	

A.5.1.7 Contention Resolution

This subclause covers the requirements of 6.2.8 of IEEE 802.16.

Table A.19—Contention Resolution

Item	Capability	Reference	Status	Support
1	The SS supports truncated exponential backoff for initial ranging	6.2.8	m	
2	The SS supports truncated exponential backoff for bandwidth request contention	6.2.8	c1	

c1: IF A.16/8 OR A.16/9 THEN m ELSE n/a

A.5.1.8 Network Entry and Initialization

This subclause covers the requirements of 6.2.9 of IEEE 802.16.

Table A.20—Network Entry and Initialization

Item	Capability	Reference	Status	Support
1	Obtain Downlink Parameters	6.2.9.2	m	
2	Obtain Uplink Parameters	6.2.9.3, 6.2.9.4	m	
3	Initial Ranging	6.2.9.5, 6.2.9.6	m	
4	Negotiate Basic Capabilities	6.2.9.7	m	
5	SS Authorization	6.2.9.8, 7.2	m	
6	Registration	6.2.9.9	m	
7	Establish IP connectivity	6.2.9.10	m	
8	Establish ToD	6.2.9.11	m	
9	Transfer operational parameters	6.2.9.12	m	

A.5.1.8.1 Obtain Downlink Parameters

This subclause covers the requirements of 6.2.9.2 of IEEE 802.16.

Table A.21—Obtain Downlink Parameters

Item	Capability	Reference	Status	Support
1	SS scans allowed channels for preamble and DL-MAP	6.2.9.2	m	
2	SS receives DL-MAP correctly	6.2.9.2	m	
3	SS receives DCD correctly	6.2.9.2	m	
4	SS maintains downlink synch correctly	6.2.9.2	m	

A.5.1.8.2 Obtain Uplink Parameters

This subclause covers the requirements of 6.2.9.3 and 6.2.9.4 of IEEE 802.16.

Table A.22—Obtain Uplink Parameters

Item	Capability	Reference	Status	Support
1	SS receives UCD correctly	6.2.9.3, 6.2.9.4	m	
2	SS maintains uplink parameters	6.2.9.3	m	

A.5.1.8.3 Initial Ranging

This subclause covers the requirements of 6.2.9.5 and 6.2.9.6 of IEEE 802.16.

Table A.23—Initial Ranging

Item	Capability	Reference	Status	Support
1	SS receives UL-MAP with Initial Ranging slot(s)	6.2.9.5	m	
2	SS random access algorithm to select slot	6.2.9.5	m	
3	SS sends RNG-REQ in random slot within backoff window, using the correct burst profile	6.2.9.5	m	
4	SS receives RNG-RSP	6.2.9.5	m	
5	SS establishes Basic and Primary Management connections	6.2.9.5	m	
6	SS performs timing and power adjustment	6.2.9.6	m	
7	Use the RNG-REQ message to request a DL burst profile change	6.2.10.1	o	
8	SS performs network entry and initialization on DL Frequency Override channel, if instructed	6.2.9.6	m	
9	Use the RNG-REQ message in station maintenance interval.	6.2.10	m	

A.5.1.8.4 Negotiate Basic Capabilities

This subclause covers the requirements of 6.2.9.7 of IEEE 802.16.

Table A.24—Negotiate Basic Capabilities

Item	Capability	Reference	Status	Support
1	SS sends SBC-REQ	6.2.9.7	m	
2	SS receives SBC-RSP	6.2.9.7	m	
3	SS resends SBC-REQ on time-out	6.2.9.7	m	

A.5.1.8.5 SS Authorization

This subclause covers the requirements of 6.2.9.8 of IEEE 802.16.

Table A.25—SS Authorization

Item	Capability	Reference	Status	Support
1	SS sends Authorization Request (PKM-REQ with <i>Code=4</i>)	6.2.9.8, 7.2	m	
2	SS receives Authorization Reply (PKM-REQ with <i>Code=5</i>)	6.2.9.8, 7.2	m	
3	SS stores Authorization Key (AK) and derives KEK, HMAC_KEY_U and HMAC_KEY_D	6.2.9.8, 7.2	m	
4	SS establishes SAs listed in Authorization Reply	6.2.9.8, 7.2	m	
5	SS resends Authorization Request on time-out	6.2.9.8, 7.2	m	

A.5.1.8.6 Registration

This subclause covers the requirements of 6.2.9.9 of IEEE 802.16.

Table A.26—Registration

Item	Capability	Reference	Status	Support
1	SS sends REG-REQ	6.2.9.9	m	
2	SS receives REG-RSP	6.2.9.9	m	
3	SS establishes Secondary Management Connection	6.2.9.9	m	
4	SS resends REG-REQ on time-out	6.2.9.9	m	

A.5.1.8.7 Establish IP Connectivity

This subclause covers the requirements of 6.2.9.10 of IEEE 802.16.

Table A.27—Establish IP Connectivity

Item	Capability	Reference	Status	Support
1	SS sends DHCPDISCOVER on Secondary Management Connection	6.2.9.10	m	
2	SS receives DHCPOFFER on Secondary Management Connection	6.2.9.10	m	
3	SS sends DHCPREQUEST on Secondary Management Connection	6.2.9.10	m	
4	SS receives DHCPACK on Secondary Management Connection	6.2.9.10	m	
5	SS establishes IP parameters	6.2.9.10	m	

A.5.1.8.8 Establish ToD

This subclause covers the requirements of 6.2.9.11 of IEEE 802.16.

Table A.28—Establish ToD

Item	Role	Reference	Status	Support
1	SS sends Time of Day request	6.2.9.11	m	
2	SS receives Time of Day response	6.2.9.11	m	
3	SS establishes Time of Day	6.2.9.11	m	

A.5.1.8.9 TFTP-CPLT, TFTP-RSP

This subclause covers the requirements of 6.2.9.12 of IEEE 802.16.

Table A.29—TFTP-CPLT, TFTP-RSP

Item	Role	Reference	Status	Support
1	SS sends TFTP-CPLT after successful configuration	6.2.9.12	m	
2	SS receives TFTP-RSP after sending TFTP-CPLT	6.2.9.12	m	
3	SS retransmits TFTP-CPLT on failure to receive TFTP-RSP after sending TFTP-CPLT	6.2.9.12	m	

A.5.1.9 Periodic Ranging and Downlink Burst Profile Management

This subclause covers the requirements of 6.2.10 of IEEE 802.16.

Table A.30—Periodic Ranging – SS

Item	Capability	Reference	Status	Support
1	Reinitialize after T4 with no periodic ranging opportunity	6.2.10	m	
2	Re-range after RNG-RSP with Ranging Status = re-range (4)	6.2.10	m	
3	Adjust timing and/or transmit power in response to a received RNG-RSP	6.2.10	m	
4	Request change to more appropriate DL burst profile with the DBPC-REQ message based upon thresholds in DCD	6.2.10	m	
5	Change DL burst profile based upon RNG-RSP.	6.2.10	m	
6	Change DL burst profile based upon DBPC-RSP	6.2.10	m	

A.5.1.10 Update of Channel descriptors

This subclause covers the requirements of 6.2.11 of IEEE 802.16.

Table A.31—Update of Channel Descriptors – SS

Item	Capability	Reference	Status	Support
1	Support of two simultaneous sets of burst descriptors	6.2.11	m	
2	Store new uplink burst descriptors upon receiving UCD message with incremented Configuration Change Count	6.2.11	m	
3	Store new downlink burst descriptors upon receiving DCD message with incremented Configuration Change Count	6.2.11	m	
4	Transmit with new generation of burst descriptors after receiving UL-MAP with UCD Count matching the new Configuration Change Count	6.2.11	m	
5	Receive with new generation of burst descriptors after receiving DL-MAP with DCD Count matching the new Configuration Change Count	6.2.11	m	

A.5.1.11 Multicast Polling Groups

This subclause covers the requirements of 6.2.12 of IEEE 802.16.

Table A.32—Multicast Polling Groups – SS

Item	Capability	Reference	Status	Support
1	SS receives MCA-REQ	6.2.12	m	
2	SS supports participation in multicast polling group	6.2.12	o	
3	SS transmits MCA-RSP	6.2.12	m	

A.5.1.12 Quality of Service

This subclause covers the requirements of 6.2.13 of IEEE 802.16.

A.5.1.12.1 Dynamic Service Flow Operations**Table A.33—Dynamic Service Flow Operations**

Item	Role	Reference	Status	Support
1	Creation – BS Initiated	6.2.13	m	
2	Creation – SS initiated	6.2.13	c1
