American National Standards Institute

Secretariat

The Institute of Electrical and Electronics Engineers, Inc.

Approved 30 April 1997

American National Standards Institute

Abstract: The dimensional features and the material of refractors as described in ANSI C136.14-1988, American National Standard for Roadway Lighting Equipment—Enclosed Side-Mounted Luminaires for Horizontal-Burning High-Intensity Discharge Lamps, are covered.
Keywords: mechanical interchangeability, refractors, side-mounted luminaires

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Board. Members of the committees serve voluntarily and without compensation. They are not necessarily members of the Institute. The standards developed within IEEE represent a consensus of the broad expertise on the subject within the Institute as well as those activities outside of IEEE that have expressed an interest in participating in the development of the standard.

Use of an IEEE Standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of all concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE Standards Board
445 Hoes Lane
P.O. Box 1331
Piscataway, NJ 08855-1331
USA

Note: Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Introduction

(This introduction is not a part of ANSI C136.17-1997, American National Standard for Roadway Lighting Equipment—Enclosed Side-Mounted Luminaires for Horizontal-Burning High-Intensity-Discharge Lamps—Mechanical Interchangeability of Refractors.)

This standard was prepared by the Roadway Luminaire Task Force of Subcommittee C136-1, Subcommittee on Luminaires and Light-Sensitive Control Devices.

Greg Steinman, *Chair*

The Accredited Standards Committee on Roadway Lighting, C136, had the following voting members at the time this standard was approved:

Richard E. Hildreth, *Chair* **Rosemary Tennis,** *Staff Liaison*

Organization Represented	*Name of Representative*
Alabama Power Company	Scott Thurman
Area Lighting Research, Inc.	George Duve
CEW Lighting, Inc.	Dan Pitcher
Dark to Light, Inc.	Jeff D. Walters
Detroit Edison Company	Donald Edwards
Duke Power Company	Stokes White

American National Standard for Roadway Lighting Equipment—Enclosed Side-Mounted Luminaires for Horizontal-Burning High-Intensity-Discharge Lamps—Mechanical Interchangeability of Refractors

1. Overview

1.1 Scope

This standard covers the dimensional features and the material of refractors of the approximate shape shown in Figures 1 through 3, and as described in ANSI C136.14-1988, American National Standard for Roadway Lighting Equipment—Enclosed Side-Mounted Luminaires for Horizontal-Burning High-Intensity-Discharge Lamps.

1.2 Purpose

This standard provides

a) A description and diagrams of substitute refractors for the original refractor when replacement is necessary.

b) The dimensions for a good fit for the refractor at the points of contact, the points of attachment, or both, to the reflector or the housing, or to both the reflector and the housing.

c) Requirements for light distribution acceptable to the user, but not necessarily equal to the original optical system.

NOTE—The optics package consisting of the lamp, the reflector, and the refractor configuration is unique to the individual fixture. Replacement of a single fixture component will not guarantee the same optical performance.

The requirements and figures in this standard will help keep the number of refractors needed on service vehicles to a minimum.

2. Physical dimensions

Figures 1 through 3 show the refractors' points of contact, points of attachment, or both, to the reflector, the housing, or both.

The dimensions given in these figures are for interchangeability, and other variants satisfying nondimentioned provisions may be capable of otherwise equivalent performance.

3. Materials

Refractors may be made of heat-resistant glass, polycarbonate, acrylics, or other suitable materials as specified by the user.

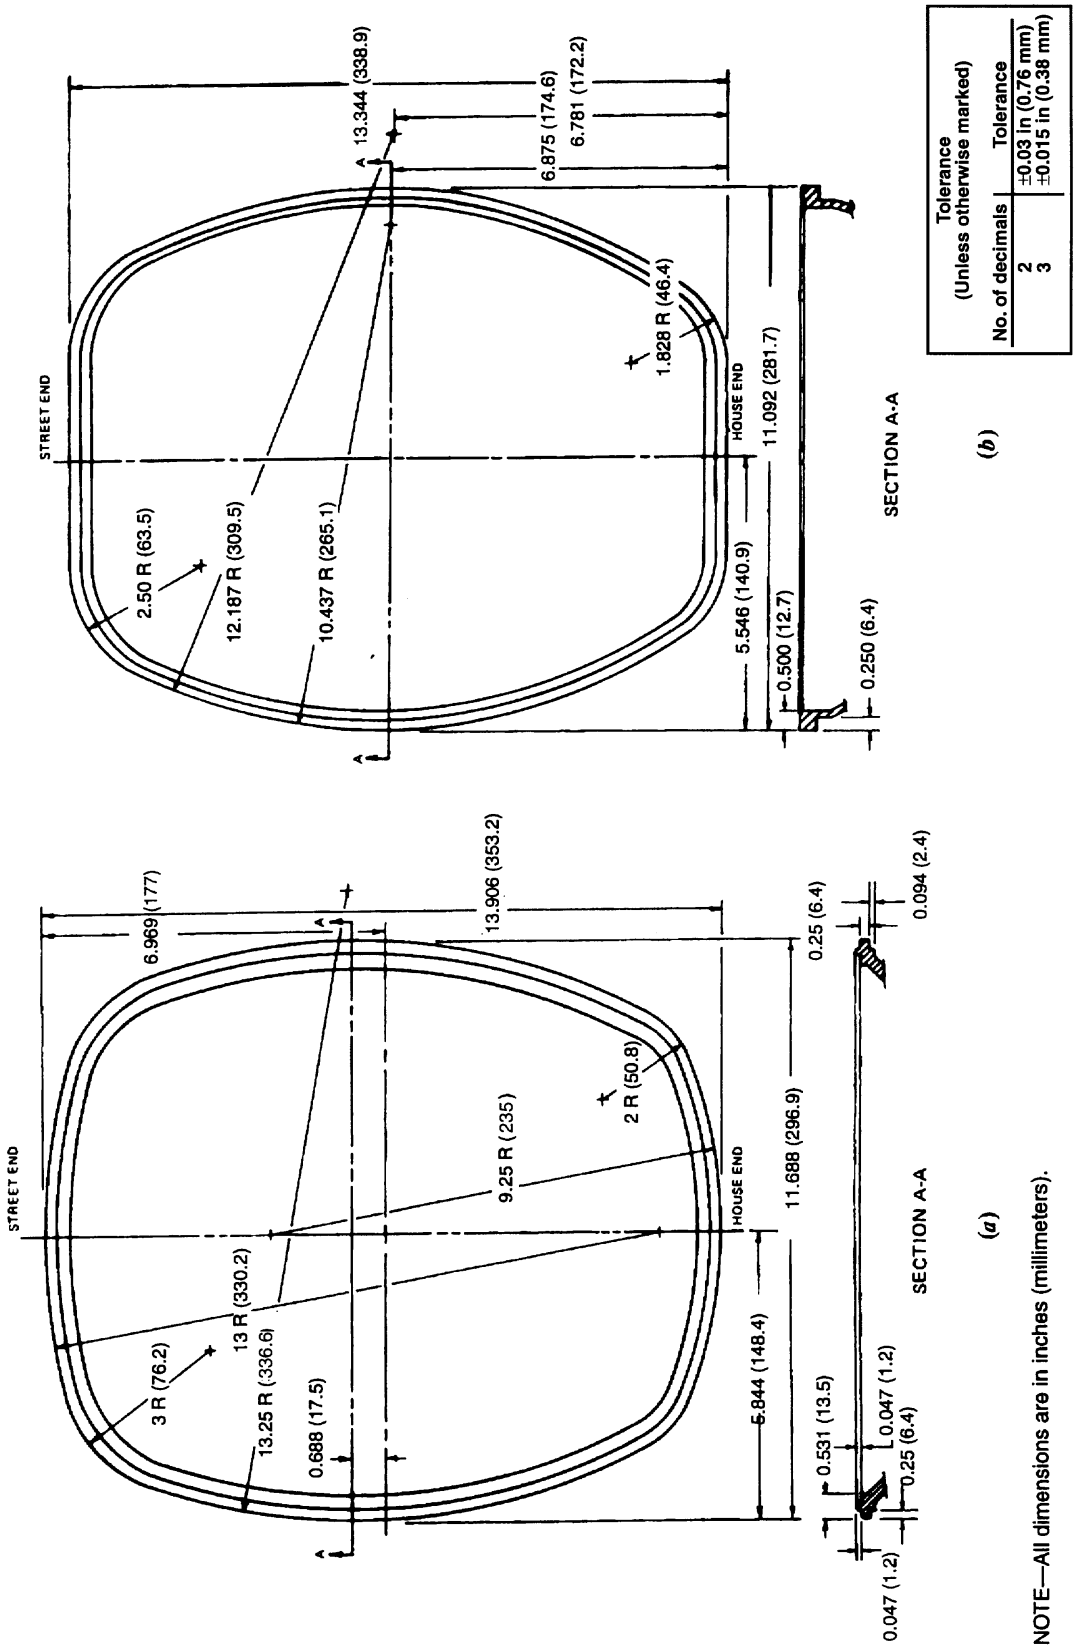

Figure 1—Flange dimensions for refractors for small horizontal-burning HID luminaires

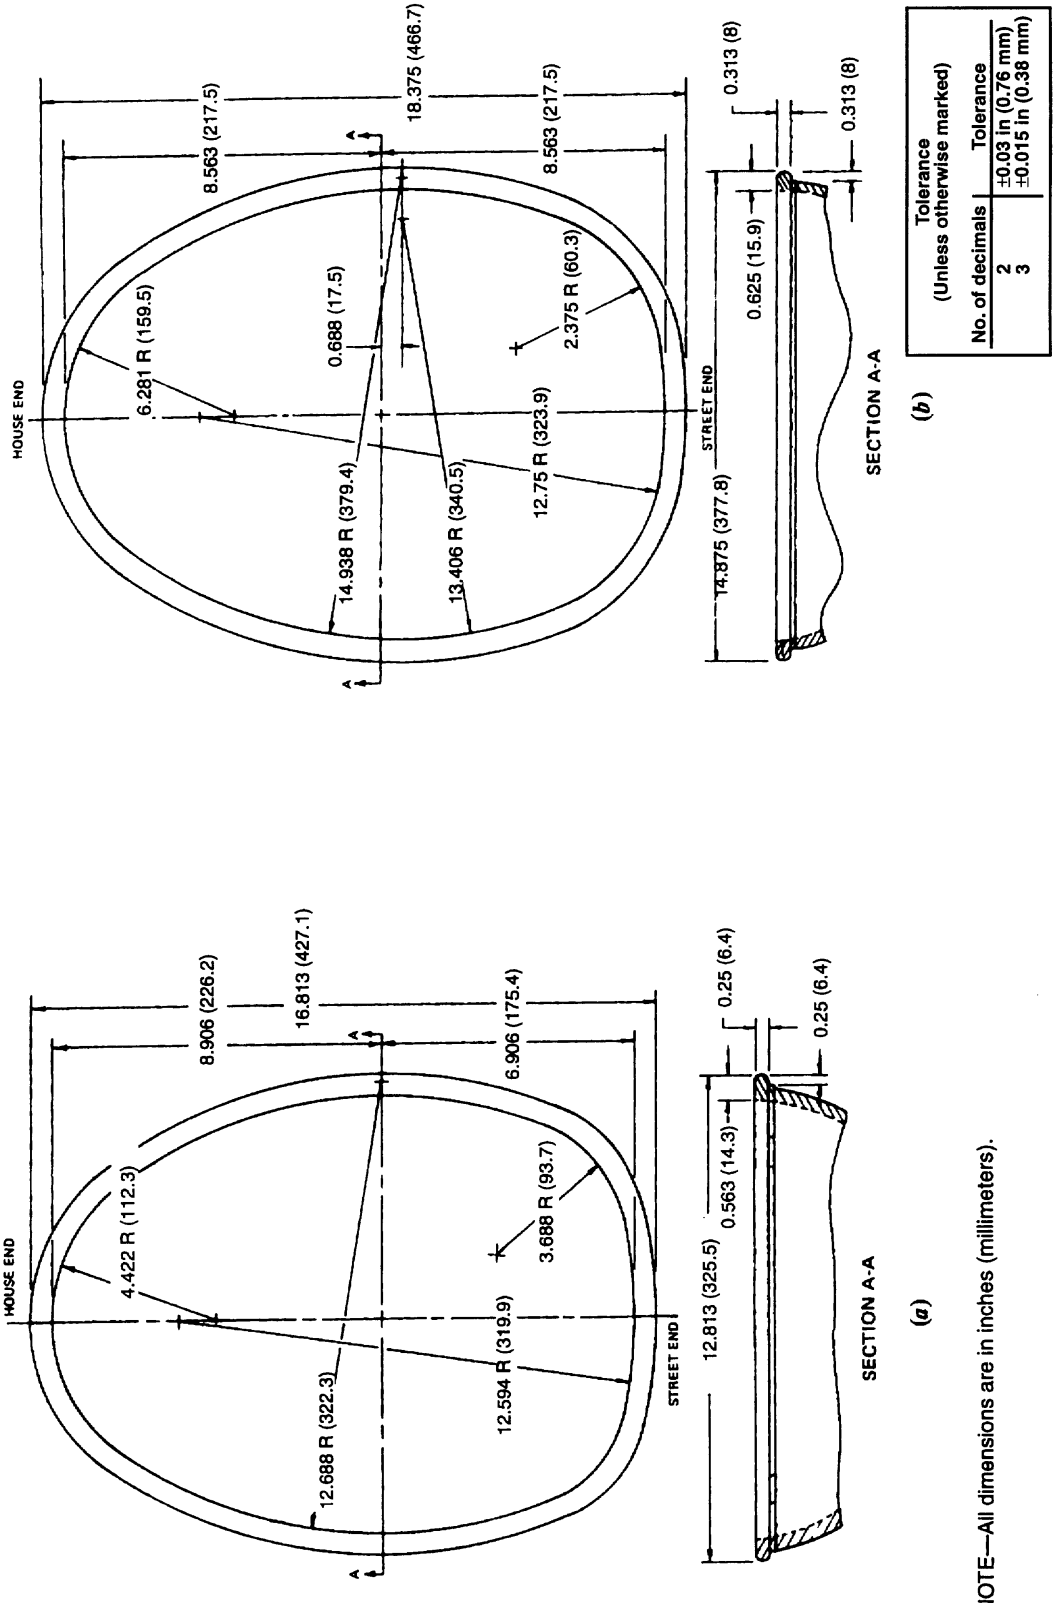
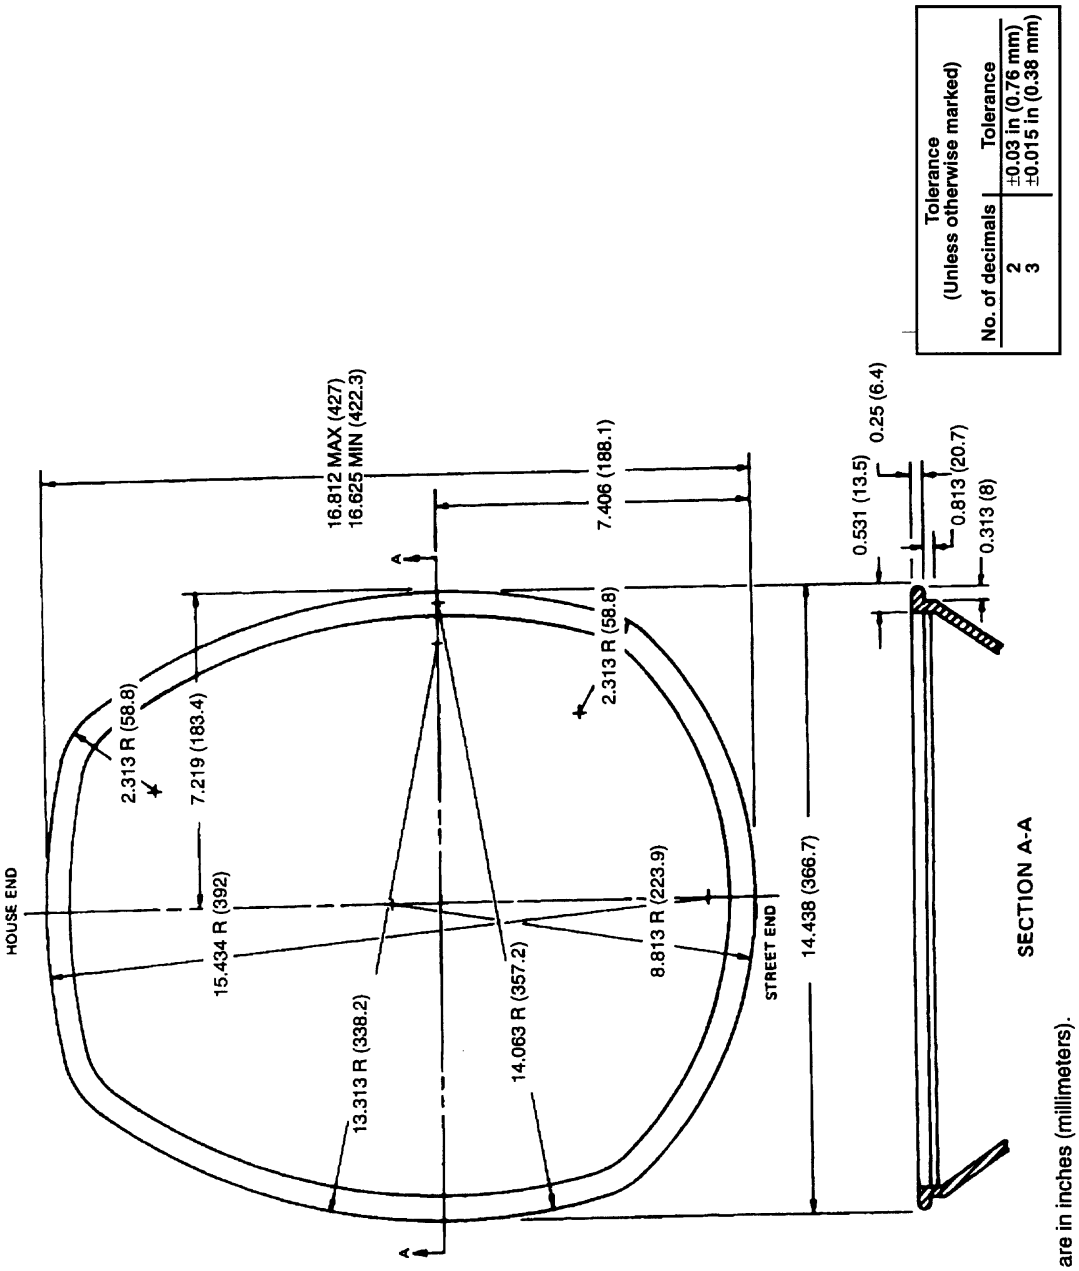
NOTE—All dimensions are in inches (millimeters).



NOTE—All dimensions are in inches (millimeters).

Figure 2—Flange dimensions for refractors for medium horizontal-burning HID luminaires



NOTE—All dimensions are in inches (millimeters).
