ITU-T Recommendation M.3101

(Previously "CCITT Recommendation")

FOREWORD

The ITU-T (Telecommunication Standardization Sector) is a permanent organ of the International Telecommunication Union (ITU). The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, establishes the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

The approval of Recommendations by the Members of the ITU-T is covered by the procedure laid down in WTSC Resolution No. 1 (Helsinki, March 1-12, 1993).

ITU-T Recommendation M.3101 was prepared by ITU-T Study Group 4 (1993-1996) and was approved under the WTSC Resolution No. 1 procedure on the 27th of July 1995.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

MANAGED OBJECT CONFORMANCE STATEMENTS FOR THE GENERIC NETWORK INFORMATION MODEL

(Geneva, 1995)

1 Scope

This Recommendation defines management conformance requirements of the Generic Network Information Model (GNIM) defined in Recommendation M.3100. This Recommendation does not define conformance requirements for management information that is only referred to in Recommendation M.3100.

2 References

The following Recommendations and other references contain provisions which, through reference in this text, constitute provisions of this Recommendation. At the time of publication, the editions indicated were valid. All Recommendations and other references are subject to revision: all users of this Recommendation are therefore encouraged to investigate the possibility of applying the most recent edition of the Recommendations and other references listed below. A list of the currently valid ITU-T Recommendations is regularly published.

- ITU-T Recommendation M.3100 (1995), *Generic network information model*.
- ITU-T Recommendation Q.821 (1993), *Stage 2 and stage 3 description for the Q3 interface – Alarm surveillance*.
- ITU-T Recommendation X.291 (1995), *OSI conformance testing methodology and framework for protocol Recommendations for ITU-T applications – Abstract test suite specification*.
- ITU-T Recommendation X.296 (1996), *OSI conformance testing methodology and framework for protocol Recommendations for ITU-T applications – Implementation conformance statement*.
- CCITT Recommendation X.721 (1992), *Information technology – Open Systems Interconnection – Structure of management information: Definition of management information*.
- ITU-T Recommendation X.724 (1993), *Information technology – Open Systems Interconnection – Structure of management information: Requirements and guidelines for implementation conformance statement proformas associated with OSI management*.

3 Abbreviations

For the purposes of this Recommendation, the following abbreviations are used:

GNIM	Generic Network Information Model
MCS	Management Conformance Summary
MOCS	Managed Object Conformance Statement
MRCS	Managed Relationship Conformance Statement

4 Management information conformance requirements

A Management Conformance Summary (MCS) proforma which conforms to this Recommendation shall be textually identical to the MCS proforma specified in Annex A, differing only in pagination and page headers.

Managed Object Conformance Statement (MOCS) proforma of managed object classes defined in Recommendation M.3100, which conforms to this Recommendation shall be textually identical to the MOCS proforma specified in Annex B, differing only in pagination and page headers.

Managed Relationship Conformance Statement (MRCS) proforma for name bindings defined in Recommendation M.3100, which conforms to this Recommendation shall be textually identical to the MRCS proforma specified in Annex C, differing only in pagination and page headers.

A supplier of a system which conforms to this Recommendation and Recommendation M.3100 shall:

- provide the information necessary to uniquely identify both the supplier and the implementation;
- complete the management conformance summary proforma in Annex A;
- complete the managed object conformance statement proformas in Annex B;
- complete the managed relationship conformance statement proformas in Annex C.

5 Structure

The management conformance summary is contained in Annex A. The MCS does not include conformance summary of the deprecated/obsolete managed object classes and name binding that are included in Appendix II/M.3100.

Annex B defines MOCS proformas for those managed object classes that are defined in the main part of Recommendation M.3100, i.e. excluding deprecated/obsolete managed object classes defined in Appendix II/M.3100.

Annex C defines MRCS proformas for name bindings defined in Recommendation M.3100.

Appendix I defines MOCS proformas for deprecated/obsolete managed object classes and name bindings defined in Appendix II/M.3100.

Appendix II defines MRCS proformas for deprecated/obsolete name bindings included in Appendix II/M.3100.

6 Additional guidelines

6.1 Use of ASN.1 NameType syntax

The NameType syntax is used for naming and is defined as a choice of integer or string syntax. An implementation may use either or both of these alternatives (for different object instances). The use of these syntaxes affect the behaviour of filtered operations.

The supplier of a system which conforms to this Recommendation and Recommendation M.3100 shall, for each attribute using the NameType syntax, indicate the expected result in the “Additional information” column.

Annex A

MCS proforma¹⁾

(This annex forms an integral part of this Recommendation)

A.1 Introduction

A.1.1 Purpose and structure

The Management Conformance Summary (MCS) is a statement by a supplier that identifies an implementation and provides information on whether the implementation claims conformance to any of the listed set of standards that specify conformance requirements to OSI management.

¹⁾ Users of this Recommendation may freely reproduce the MCS proforma in this annex so that it can be used for its intended purpose, and may further publish the completed MCS.

The MCS proforma is a document, in the form of a questionnaire, designed by a proforma specifier, that when completed by the supplier of an implementation becomes the MCS.

A.1.2 Instructions for completing the MCS proforma to produce the MCS²⁾

The supplier of the implementation shall enter an explicit statement in each of the boxes provided. Specific instruction is provided in the text which preceedes each table.

A.1.3 Symbols and abbreviations

The following abbreviations are used throughout the proformas of Annexes A, B and C.

m3100InformationModel	{ ccitt(0) recommendation(0) m(13) gnm(3100) informationModel(0) }
m3100ObjectClass	{ m3100InformationModel managedObjectClass(3) }
m3100NameBinding	{ m3100InformationModel nameBinding(6) }
m3100Attribute	{ m3100InformationModel attribute(7) }
m3100Action	{ m3100InformationModel action(9) }
q821InformationModel	{ ccitt(0) recommendation(0) q(17) q821(821) informationModel(0) }
q821Parameter	{ q821InformationModel parameter(9) }
smi2MobjectClass	{ joint-iso-ccitt(2) ms(9) smi(3) part2(2) managedObjectClass(3) }
smi2NameBinding	{ joint-iso-ccitt(2) ms(9) smi(3) part2(2) nameBinding(6) }
smi2AttributeID	{ joint-iso-ccitt(2) ms(9) smi(3) part2(2) attribute(7) }
smi2Notification	{ joint-iso-ccitt(2) ms(9) smi(3) part2(2) notification(10) }

A.2 Identification of the implementation

A.2.1 Date of statement

The supplier of the implementation shall enter the date of this statement in the box below. Use the format DD-MM-YYYY.

Date of statement

A.2.2 Identification of the implementation

The supplier of the implementation shall enter information necessary to uniquely identify the implementation and the system(s) in which it may reside, in the box below.

²⁾ Instructions for completing the MCS proforma are specified in Rec. X.724 | ISO/IEC 10165-6, clause 5.

A.2.3 Identification of the implementation

The supplier of the implementation shall enter information necessary to uniquely identify the implementation and the system(s) in which it may reside, in the box below.

A.2.4 Contact

The supplier of the implementation shall provide information on whom to contact if there are any queries concerning the content of the MCS, in the box below.

A.3 Identification of the Recommendation in which the management information is defined

The supplier of the implementation shall enter the title, reference number and date of the publication of the Recommendation | International Standard which specifies the management information to which conformance is claimed, in the box below.

Recommendation to which conformance is claimed

A.3.1 Technical corrigenda implemented

The supplier of the implementation shall enter the reference numbers of implemented technical corrigenda which modify the Recommendation to the identified Recommendation, in the box below.

A.4 Management conformance summary

The supplier of the implementation shall provide information on whether the implementation claims conformance to any of the set of standards globally representing the implementation under claim. For each standard the supplier of the implementation claims conformance to, the corresponding conformance statement(s) shall be filled in, or referenced by, the MCS. Columns 7 (Support), 8 (Table numbers of PICS/MOCS/MRCS) and 9 (Additional information) are to be filled in by the supplier of the implementation.

The following common notations, defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7 are used for the status value column:

- m mandatory;
- o optional;
- c conditional;
- x prohibited;
- not applicable or out of scope.

Note that “c”, “m”, “o” and “x” are prefixed by a “c:” when nested under a conditional or optional item of the same table.

Note that “o” may be suffixed by “.n” (where “n” is a unique number) for mutually exclusive or selectable options among a set of status values.

The following common notations, defined in Rec. X.724 | ISO/IEC 10165-6 and Rec. X.296 | ISO/IEC 9646-7 are used for the support answer column:

- Y implemented;
- N not implemented;
- no answer required;
- Ig the item is ignored (i.e. processed syntactically but not semantically).

See Tables A.1 to A.3.

Annex B

MOCS proforma³⁾

(This annex forms an integral part of this Recommendation)

B.1 Introduction

The purpose of this MOCS proforma is to provide a mechanism for a supplier of an implementation which claims conformance to a managed object class to provide conformance information in a standard form.

B.2 Instructions for completing the MOCS proforma to produce a MOCS⁴⁾

The supplier of the implementation shall state which items are supported in the tables and if necessary provide additional information.

The following common notations, defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7 are used for the status value columns:

- m mandatory;
- o optional;
- c conditional;
- x prohibited;
- not applicable or out of scope.

Note that “c”, “m”, “o” and “x” are prefixed by a “c:” when nested under a conditional or optional item of the same table.

Note that “o” may be suffixed by “.n” (where “n” is a unique number) for mutually exclusive or selectable options among a set of status values.

In the status column, the static requirements are stated as follows:

- m for characteristics contained in mandatory packages or in conditional packages if the GDMO condition is always true;
- o for characteristics of conditional packages with GDMO conditions that indicate static optionality, e.g. “if an instance supports it”;
- cn for all other conditions, where “n” is a unique integer and “cn” is a reference to a conditional status expression as defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7. Each condition denoted by “cn” is relative to the containing table;
- x for characteristics explicitly prohibited by the definition;
- for characteristics that are not mentioned by the definition.

³⁾ Users of this Recommendation may freely reproduce the MOCS proforma in this annex so that it can be used for its intended purpose, and may further publish the completed MOCS.

⁴⁾ Instructions for completing the MOCS proforma are specified in Rec. X.724 | ISO/IEC 10165-6, clause 5.

The following common notations, defined in Rec. X.724 | ISO/IEC 10165-6 and Rec. X.296 | ISO/IEC 9646-7 are used for the support answer columns:

- Y implemented;
- N not implemented;
- no answer required.

B.3 Statement of conformance to the alarmSeverityAssignmentProfile object class

See Table B.1.

c1 : IF "if an object supports allomorphism" THEN m ELSE –							
c2 : IF "any registered package, other than this package has been instantiated" THEN m ELSE –							

B.3.2 Attribute groups

There are no attribute groups defined for the managed object class.

B.3.3 Actions

There are no actions defined for this object class.

B.3.4 Notifications

The supplier of the implementation shall state whether or not the notifications specified by all packages instantiated in a managed object of this class are supported, in the "Support" and "Additional information" columns in Table B.4. The supplier of the implementation shall indicate support in terms of the confirmed and non-confirmed modes.

TABLE B.4/M.3101

B.4.2 Attribute groups

There are no attribute groups defined for the managed object class.

B.4.3 Actions

There are no actions defined for this object class.

B.4.4 Notifications

The supplier of the implementation shall state whether or not the notifications specified by all packages instantiated in a managed object of this class are supported, in the “Support” and “Additional information” columns in Table B.8. The supplier of the implementation shall indicate support in terms of the confirmed and non-confirmed modes.

TABLE B.8/M.3101

Notification support

B.28.1 Attributes

The supplier of the implementation shall state whether or not the attributes specified by all packages instantiated in a managed object of this class are supported, in the “Support” and “Additional information” columns in Table B.109. The supplier of the implementation shall indicate support for each of the operations for each attribute supported.

TABLE B.109/M.3101

Attribute support

Index	Attribute template label	Value of object identifier for attribute	Constraints and values	Set by create		Get		Replace

B.31.5 Parameters

There are no parameters defined for this object class.

Annex C

MRCS proforma⁵⁾

(This annex forms an integral part of this Recommendation)

C.1 Introduction

The purpose of this MRCS proforma is to provide a mechanism for a supplier of an implementation which claims conformance to a managed object class to provide conformance information in a standard form.

C.2 Instructions for completing the MRCS proforma to produce a MRCS⁶⁾

The supplier of the implementation shall state which items are supported in the tables and if necessary provide additional information.

The following common notations, defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7 are used for the status value columns:

- m mandatory;
- o optional;
- c conditional;
- x prohibited;
- not applicable or out of scope.

Note that “c”, “m”, “o” and “x” are prefixed by a “c:” when nested under a conditional or optional item of the same table.

Note that “o” may be suffixed by “.n” (where “n” is a unique number) for mutually exclusive or selectable options among a set of status values.

In the status column, the static requirements are stated as follows:

- m for characteristics contained in mandatory packages or in conditional packages if the GDMO condition is always true;
- o for characteristics of conditional packages with GDMO conditions that indicate static optionality, e.g. “if an instance supports it”;
- cn for all other conditions, where “n” is a unique integer and “cn” is a reference to a conditional status expression as defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7. Each condition denoted by “cn” is relative to the containing table;
- x for characteristics explicitly prohibited by the definition;
- for characteristics that are not mentioned by the definition.

The following common notations, defined in Rec. X.724 | ISO/IEC 10165-6 and Rec. X.296 | ISO/IEC 9646-7 are used for the support answer columns:

- Y implemented;
- N not implemented;
- no answer required;
- Ig the item is ignored (i.e. processed syntactically, but not semantically).

⁵⁾ Users of this Recommendation may freely reproduce the MRCS proforma in this annex so that it can be used for its intended purpose, and may further publish the completed MRCS.

⁶⁾ Instructions for completing the MRCS proforma are specified in Rec. X.724 | ISO/IEC 10165-6, clause 5.

C.3 Name binding support

The second part may only contain status values other than “x”, i.e. not applicable, for name bindings that may be used for creation or deletion of managed object through management operations. Hence, the second part of Table C.1 only show name bindings for which at least one of the status values are different from “x”. See also Table C.2.

TABLE C.1/M.3101

Appendix I**MOCS proforma⁷⁾**

(This appendix does not form an integral part of this Recommendation)

I.1 Introduction

The purpose of this MOCS proforma is to provide a mechanism for a supplier of an implementation which claims conformance to a managed object class to provide conformance information in a standard form.

I.2 Instructions for completing the MOCS proforma to produce a MOCS⁸⁾

The supplier of the implementation shall state which items are supported in the tables and if necessary provide additional information.

The following common notations, defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7 are used for the status value columns:

- m mandatory;
- o optional;
- c conditional;
- x prohibited;
- not applicable or out of scope.

Note that “c”, “m”, “o” and “x” are prefixed by a “c:” when nested under a conditional or optional item of the same table.

Note that “o” may be suffixed by “.n” (where “n” is a unique number) for mutually exclusive or selectable options among a set of status values.

In the status column, the static requirements are stated as follows:

- m for characteristics contained in mandatory packages or in conditional packages if the GDMO condition is always true;
- o for characteristics of conditional packages with GDMO conditions that indicate static optionality, e.g. “if an instance supports it”;

⁷⁾ Users of this Recommendation may freely reproduce the MOCS proforma in this appendix so that it can be used for its intended purpose, and may further publish the completed MOCS.

⁸⁾ Instructions for completing the MOCS proforma are specified in Rec. X.724 | ISO/IEC 10165-6, clause 5.

- cn for all other conditions, where “n” is a unique integer and “cn” is a reference to a conditional status expression as defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7. Each condition denoted by “cn” is relative to the containing table;
- x for characteristics explicitly prohibited by the definition;
- for characteristics that are not mentioned by the definition.

The following common notations, defined in Rec. X.724 | ISO/IEC 10165-6 and Rec. X.296 | ISO/IEC 9646-7 are used for the support answer columns:

- Y implemented;
- N not implemented;
- no answer required;
- Ig the item is ignored (i.e. processed syntactically, but not semantically).

I.3 Statement of conformance to the connection object class

See Table I.1.

TABLE I.1/M.3101
Managed object class support

Index	Managed object class template label	Value of object identifier for class	Support of all mandatory features	Is the actual class the same as the managed object class to which conformance is claimed? (Y/N)
1	connection	{m3100ObjectClass 12}		

If the answer to the actual class question in the managed object class support table is no, the supplier of the implementation shall fill in the actual class support in Table I.2.

I.3.2 Attribute groups

There are no attribute groups defined for this object class.

I.3.3 Actions

There are no actions defined for this object class.

I.3.4 Notifications

The supplier of the implementation shall state whether or not the notifications specified by all packages instantiated in a managed object of this class are supported, in the “Support” and “Additional information” columns in Table I.4. The supplier of the implementation shall indicate support in terms of the confirmed and non-confirmed modes.

c2 : IF “any registered package, other than this package has been instantiated” THEN m ELSE –							

I.4.2 Attribute groups

There are no attribute groups defined for the managed object class.

I.4.3 Actions

There are no actions defined for this object class.

I.4.4 Notifications

The supplier of the implementation shall state whether or not the notifications specified by all packages instantiated in a managed object of this class are supported, in the “Support” and “Additional information” columns in Table I.9. The supplier of the implementation shall indicate support in terms of the confirmed and non-confirmed modes.

TABLE I.9/M.3101

Notification support

Index	Notification type template label	Value of object identifier for notification type	Constraints and values	Status	Support		Additional information
					Con-	Non-	
4.1	attributeValueChange	{smi2Notification 1}		o			
4.2	communicationsAlarm	{smi2Notification 2}		o			
4.3	objectCreation	{smi2Notification 6}		o			
4.4	objectDeletion	{smi2Notification 7}		o			
4.5	stateChange	{smi2Notification 14}		o			

TABLE I.9/M.3101

Notification support (end)

Index	Sub-index	Notification field name label	Value of object identifier of attribute type associated with field	Constraints and values	Status	Support	Additional information
4.1	4.1.1	additionalInformation	{smi2AttributeID 6}		c:o

	4.5.4	correlatedNotifications	{smi2AttributeID 12}		c:o		
	4.5.5	notificationIdentifier	{smi2AttributeID 16}		c:o		
	4.5.6	sourceIndicator	{smi2AttributeID 26}		c:o		
	4.5.7	stateChangeDefinition	{smi2AttributeID 28}		c:m		

I.4.5 Parameters

The supplier of the implementation shall state whether or not the parameters specified by all packages instantiated in a managed object of this class are supported, in the “Support” and “Additional information” columns in Table I.10.

TABLE I.10/M.3101

Parameter support

Index	Parameter template label	Value of object identifier for parameter	Constraints and values	Status	Support	Additional information
5.1	correlatedRecordNameParameter	{q821Parameter 2}		o		
5.2	logRecordIdParameter	{q821Parameter 1}		o		
5.3	suspectObjectListParameter	{q821Parameter 3}		o		

Appendix II

MRCS proforma⁹⁾

(This appendix does not form an integral part of this Recommendation)

II.1 Introduction

The purpose of this MRCS proforma is to provide a mechanism for a supplier of an implementation which claims conformance to a managed object class to provide conformance information in a standard form.

II.2 Instructions for completing the MRCS proforma to produce a MRCS¹⁰⁾

The supplier of the implementation shall state which items are supported in the tables and if necessary provide additional information.

The following common notations, defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7 are used for the status value columns:

- m mandatory;
- o optional;
- c conditional;
- x prohibited;
- not applicable or out of scope.

Note that “c”, “m”, “o” and “x” are prefixed by a “c:” when nested under a conditional or optional item of the same table.

Note that “o” may be suffixed by “.n” (where “n” is a unique number) for mutually exclusive or selectable options among a set of status values.

In the status column, the static requirements are stated as follows:

- m for characteristics contained in mandatory packages or in conditional packages if the GDMO condition is always true;
- o for characteristics of conditional packages with GDMO conditions that indicate static optionality, e.g. “if an instance supports it”;
- cn for all other conditions, where “n” is a unique integer and “cn” is a reference to a conditional status expression as defined in Rec. X.291 | ISO/IEC 9646-2 and Rec. X.296 | ISO/IEC 9646-7. Each condition denoted by “cn” is relative to the containing table;
- x for characteristics explicitly prohibited by the definition;
- for characteristics that are not mentioned by the definition.

The following common notations, defined in Rec. X.724 | ISO/IEC 10165-6 and Rec. X.296 | ISO/IEC 9646-7 are used for the support answer columns:

- Y implemented;
- N not implemented;
- no answer required;
- Ig the item is ignored (i.e. processed syntactically, but not semantically).

⁹⁾ Users of this Recommendation may freely reproduce the MRCS proforma in this appendix so that it can be used for its intended purpose, and may further publish the completed MRCS.

¹⁰⁾ Instructions for completing the MRCS proforma are specified in Rec. X.724 | ISO/IEC 10165-6, clause 5.

II.3 Name binding support

The second part may only contain status values other than “x”, i.e. not applicable, for name bindings that may be used for creation or deletion of managed object through management operations. Hence, the second part of Table II.1 only shows name bindings for which at least one of the status values is different from “x”.

TABLE II.1/M.3101

Name binding support

Index	Attribute binding template label	Value of object identifier for name binding	Constraints and values	Status	Support	Additional information
1	connection-network	{m3100NameBinding 2}		o		
2	trail-network	{m3100NameBinding 22}		o		

TABLE II.1/M.3101

Name binding support (end)

Index	Sub-index	Operation	Constraints and values	Status	Support	Additional information
1	1.1	Create support		c:m		
	1.1.1	Create with reference object		c:x		
	1.1.2	Create with automatic instance naming		c:x		
	1.2	Delete support		c:m		
	1.2.1	Delete only if no contained objects		c:x		
	1.2.2	Delete contained objects		c:x		
	2.1	Create support		c:m		
2	2.1.1	Create with reference object		c:m		
	2.1.2	Create with automatic instance naming		c:m		
	2.2	Delete support		c:m		
	2.2.1	Delete only if no contained objects		c:m		
	2.2.2	Delete contained objects		c:x
