The ITU-T Recommendation T.412, Corrigendum 1 was approved on the 16th of October 1997. The identical text is also published as ISO/IEC International Standard 8613-2.

## FOREWORD

ITU (International Telecommunication Union) is the United Nations Specialized Agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the ITU. The ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Conference (WTSC), which meets every four years, establishes the topics for study by the ITU-T Study Groups which, in their turn, produce Recommendations on these topics.

The approval of Recommendations by the Members of the ITU-T is covered by the procedure laid down in WTSC Resolution No. 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

## NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

## INTELLECTUAL PROPERTY RIGHTS

The ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. The ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, the ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

ITU-T RECOMMENDATION

INFORMATION TECHNOLOGY – OPEN DOCUMENT ARCHITECTURE (ODA)  
AND INTERCHANGE FORMAT: DOCUMENT STRUCTURES

TECHNICAL CORRIGENDUM 1

**1) Subclause 9.4.3.4**

*Under Default value, replace* Such that edge losses are minimized *by* See 11.3.2.

**2) Subclause 11.3.2**

*Replace the second to last paragraph by:*

In the case that this Specification does not define an assured reproduction area for a nominal page, then the assured reproduction area position and dimensions are determined from the document profile attribute “assured reproduction areas”.

**3) Subclause 11.3.3**

*Replace the last paragraph by:*

For other page sizes, the dimensions of the assured reproduction area and its position on the nominal page shall be defined by the attribute “assured reproduction areas” in the document profile. If the value of this attribute does not contain an entry corresponding to a given nominal page size, then the dimensions of the assured reproduction area for that nominal page size are considered to be equal to those of the nominal page, and its position is considered to be such that its top left corner is coincident with that of the nominal page.

## ITU-T RECOMMENDATIONS SERIES

Series A	Organization of the work of the ITU-T
Series B	Means of expression: definitions, symbols, classification
Series C	General telecommunication statistics
Series D	General tariff principles
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Construction, installation and protection of cables and other elements of outside plant
Series M	TMN and network maintenance: international transmission systems, telephone circuits, telegraphy, facsimile and leased circuits
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Telephone transmission quality, telephone installations, local line networks
Series Q	Switching and signalling
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
<b>Series T</b>	<b>Terminals for telematic services</b>
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks and open system communication
Series Z	Programming languages
