

INTERNATIONAL TELECOMMUNICATION UNION

ITU-T

TELECOMMUNICATION STANDARDIZATION SECTOR OF ITU Amendment 1 X.880 (11/95)

# DATA NETWORKS AND OPEN SYSTEM COMMUNICATIONS OSI APPLICATIONS – REMOTE OPERATIONS

# INFORMATION TECHNOLOGY – REMOTE OPERATIONS: CONCEPTS, MODEL AND NOTATION

AMENDMENT 1: BUILT-IN OPERATIONS

Amendment 1 to ITU-T Recommendation X.880

(Previously "CCITT Recommendation")

#### FOREWORD

ITU (International Telecommunication Union) is the United Nations Specialized Agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of the ITU. Some 179 member countries, 84 telecom operating entities, 145 scientific and industrial organizations and 38 international organizations participate in ITU-T which is the body which sets world telecommunications standards (Recommendations).

The approval of Recommendations by the Members of ITU-T is covered by the procedure laid down in WTSC Resolution No. 1 (Helsinki, 1993). In addition, the World Telecommunication Standardization Conference (WTSC), which meets every four years, approves Recommendations submitted to it and establishes the study programme for the following period.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC. The text of ITU-T Recommendation X.880, Amendment 1, was approved on 21st of November 1995. The identical text is also published as ISO/IEC International Standard 13712-1.

#### NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized private operating agency.

# ITU-T X-SERIES RECOMMENDATIONS

# DATA NETWORKS AND OPEN SYSTEM COMMUNICATIONS

(February 1994)

# ORGANIZATION OF X-SERIES RECOMMENDATIONS

Subject area	Recommendation Series
PUBLIC DATA NETWORKS	
Services and Facilities	X.1-X.19
Interfaces	X.20-X.49
Transmission, Signalling and Switching	X.50-X.89
Network Aspects	X.90-X.149
Maintenance	X.150-X.179
Administrative Arrangements	X.180-X.199
OPEN SYSTEMS INTERCONNECTION	
Model and Notation	X.200-X.209
Service Definitions	X.210-X.219
Connection-mode Protocol Specifications	X.220-X.229
Connectionless-mode Protocol Specifications	X.230-X.239
PICS Proformas	X.240-X.259
Protocol Identification	X.260-X.269
Security Protocols	X.270-X.279
Layer Managed Objects	X.280-X.289
Conformance Testing	X.290-X.299
INTERWORKING BETWEEN NETWORKS	
General	X.300-X.349
Mobile Data Transmission Systems	X.350-X.369
Management	X.370-X.399
MESSAGE HANDLING SYSTEMS	X.400-X.499
DIRECTORY	X.500-X.599
OSI NETWORKING AND SYSTEM ASPECTS	
Networking	X.600-X.649
Naming, Addressing and Registration	X.650-X.679
Abstract Syntax Notation One (ASN.1)	X.680-X.699
OSI MANAGEMENT	X.700-X.799
SECURITY	X.800-X.849
OSI APPLICATIONS	
Commitment, Concurrency and Recovery	X.850-X.859
Transaction Processing	X.860-X.879
Remote Operations	X.880-X.899
OPEN DISTRIBUTED PROCESSING	X.900-X.999

10)	Annex D	6

# Summary

This amendment to Rec. X.880 | ISO/IEC 13712-1 provides the definition of three built-in operations – Probe, Acknowledge and Cancel – which are of general utility to designers of ROSE-based applications.

#### INTERNATIONAL STANDARD

#### **ITU-T RECOMMENDATION**

# INFORMATION TECHNOLOGY – REMOTE OPERATIONS: CONCEPTS, MODEL AND NOTATION

# AMENDMENT 1 Built-in operations

## 1) Subclause 3.3

Add the following new definition immediately after 3.3.7:

**"3.3.8 idempotent**: A characteristic of an operation that it can be invoked repeatedly without changing the state of the performer."

The definitions which follow definition 3.3.8, should be renumbered accordingly.

## 2) Subclause 8.2.1

Add the following field underlined to the OPERATION information object class:

<b>OPERATION ::= CLASS</b>		
{		
&ArgumentType	OPTIONAL,	
&argumentTypeOptional	BOOLEAN OPTIONAL,	
&returnResult	BOOLEAN DEFAULT TRUE,	
&ResultType	OPTIONAL,	
&resultTypeOptional	<b>BOOLEAN OPTIONAL</b> ,	
&Errors	ERROR OPTIONAL,	
&Linked	OPERATION OPTIONAL,	
&synchronous	<b>BOOLEAN DEFAULT FALSE,</b>	
&idempotent	<b>BOOLEAN DEFAULT FALSE,</b>	
&alwaysReturns	<b>BOOLEAN DEFAULT TRUE,</b>	
&InvokePriority	Priority OPTIONAL,	
&ResultPriority	Priority OPTIONAL,	
& operation Code	Code UNIQUE OPTIONAL	
}		
WITH SYNTAX		
{		
[ARGUMENT	&ArgumentType [OPTIONAL	&argumentTypeOptional]]
[RETURN RESULT	&returnResult]	
[RESULT	&ResultType [OPTIONAL	&resultTypeOptional]]
[ERRORS	&Errors]	
[LINKED	&Linked]	
[SYNCHRONOUS	&synchronous]	
[IDEMPOTENT	<u>&amp;idempotent]</u>	
[ALWAYS RESPONDS	&alwaysReturns]	
[INVOKE PRIORITY	&InvokePriority]	
[RESULT-PRIORITY	&ResultPriority]	
[CODE	&operationCode]	
}		

#### ISO/IEC 13712-1:1995/Amd.1:1996 (E)

## 3) Subclause 8.2

#### Add a new subclause as follows:

**"8.2.14** The &idempotent field specifies whether or not the operation is idempotent, taking the value TRUE if it is, and FALSE otherwise."

## 4) Subclause 10.1

*Rewrite item a) as follows (with the new text underlined):* 

"a) generally useful operations, (emptyBind, emptyUnbind, no-op, probe, acknowledge, <u>cancel</u>), and their associated errors;"

# 5) Subclause 10.5.1

Rewrite the no-op OPERATION definition by adding an additional field (underlined) as follows:

```
no-op OPERATION ::= {

{

<u>IDEMPOTENT</u> TRUE

ALWAYS RESPONDS FALSE

CODE local:-1

}
```

# 6) Subclause 10.5.2

*Rewrite 10.5.2 as follows (with the new text underlined):* 

"10.5.2 The operation is idempotent and does not return."

# 7) Subclauses 10.6 through 10.16

Renumber 10.6 through 10.16 as 10.12 through 10.22 respectively.

## 8) Subclauses 10.6 through 10.11

Add the following new subclauses numbered 10.6 through 10.11:

#### 10.6 Probe

10.6.1 The probe operation enquires about the outcome of a previously invoked operation. It is specified as follows:

```
probe OPERATION ::=
{
    ARGUMENT SEQUENCE
    {
        invokeId [0] InvokeId
     }
    RESULT ENUMERATED{running(0), finished(1), unknown(2), ...}
    IDEMPOTENT TRUE
     CODE local:-2
}
```

10.6.2 There is a single argument, of type InvokeId, which identifies the invoked operation being enquired about.

**10.6.3** The request always returns a result, which indicates whether the operation invocation is still running, its performance is finished, or that it is unknown.

NOTE – An invocation may be unknown because it never happened, or because it has been forgotten by the performer.

**10.6.4** The operation is idempotent.

**10.6.5** A probe (with a result of finished) causes, as a side effect, the retransmission of any return from the invocation concerned, except if the operation was idempotent.

NOTE - This implies that the performer of a non-idempotent operation has to retain the response (result or error) if the probe operation has been included in the operation package.

#### 10.7 Acknowledge

**10.7.1** The acknowledge operation acknowledges receipt of the return of some (non-idempotent) operation invocation. It is specified as follows:

```
acknowledge OPERATION ::=
{
    ARGUMENT InvokeId
    RESULT ENUMERATED{acknowledged(0), unknown(1), ...}
    IDEMPOTENT TRUE
    CODE local:-3
}
```

10.7.2 There is a single argument, of type InvokeId, which identifies the invocation whose return is being acknowledged.

**10.7.3** The request always returns a result, which indicates either that the return is now considered acknowledged, or that the operation invocation concerned is unknown.

NOTE – An invocation may be unknown because it never happened, or because it has been forgotten by the performer.

**10.7.4** The operation is idempotent.

**10.7.5** This operation must be included in every operation package which includes the probe operation.

#### 10.8 Probe and Acknowledge

**10.8.1** The ProbeAndAcknowledge operation set comprises the two operations suggested by its name, and will frequently both be needed in a package. It is specified as follows:

ProbeAndAcknowledge OPERATION ::= {probe | acknowledge}

#### 10.9 Cancel

**10.9.1** The cancel operation requests the premature termination of the performance of an operation. Only operations which include the cancelled error (see 10.11) in their & Errors field can be cancelled. It is specified as follows:

```
cancel OPERATION ::= {
    ARGUMENT InvokeId
    ERRORS {cancelFailed}
    IDEMPOTENT TRUE
    CODE local:-4
}
```

#### ISO/IEC 13712-1: 1995/Amd.1: 1996 (E)

- **10.9.2** There is a single argument, of type InvokeId, which identifies the invoked operation being cancelled.
- 10.9.3 Should the request fail, a cancelFailed error (see 10.10) will be returned.
- **10.9.4** The operation is idempotent.

#### 10.10 Cancel failed

**10.10.1** A cancelFailed error reports a problem in performing a cancel. It is specified as follows:

cancelFailed FRROR ··-	
{	
PARAMETER	SET
{	
problem	[0] CancelProblem,
operation	[1] InvokeId
operation	
}	
CODE	local:-2
}	
CancelProblem ::= ENUMERA	TED
{unknownOp	peration(0), tooLate(1), operationNotCancellable(2),}
· · · ·	

**10.10.2** The various parameters have the meaning as defined in 10.10.2.1 and 10.10.2.2.

**10.10.2.1** The particular problem encountered with cancellation is indicated from the following possibilities:

- a) unknownOperation This operation invocation has either not happened, or has been forgotten.
- b) tooLate The operation has already been performed, or the execution is at a stage that does not permit a cancellation.
- c) operationNotCancellable The operation that was invoked was not one of those able to be cancelled.

**10.10.2.2** The identification of the operation (invocation) which was to be cancelled.

#### 10.11 Cancelled

The cancelled error is reported if some operation is cancelled. The error must be included in the & Errors field of the affected operation. It is specified as follows:

cancelled ERROR ::= {CODE local:-3}

# 9) Annex A

Change the first module reference as follows (with the change underlined):

Remote-Operations-Information-Objects {joint-iso-itu-t remote-operations(4) informationObjects(5) version2(1)}

Add the following field (underlined) to the OPERATION information object class:

<b>OPER</b> A	ATION ::= CLASS		
{			
	&ArgumentType	OPTIONAL,	
	&argumentTypeOptional	BOOLEAN OPTIONAL,	
	&returnResult	BOOLEAN DEFAULT TRUE,	
	&ResultType	OPTIONAL,	
	&resultTypeOptional	BOOLEAN OPTIONAL,	
	&Errors	ERROR OPTIONAL,	
	&Linked	<b>OPERATION OPTIONAL</b> ,	
	&synchronous	BOOLEAN DEFAULT FALSE,	
	<u>&amp;idempotent</u>	BOOLEAN DEFAULT FALSE,	
	&alwaysReturns	BOOLEAN DEFAULT TRUE,	
	&InvokePriority	Priority OPTIONAL,	
	&ResultPriority	Priority OPTIONAL,	
	&operationCode	Code UNIQUE OPTIONAL	
}			
WITH	SYNTAX		
{			
	[ARGUMENT	&ArgumentType [OPTIONAL	&argumentTypeOptional]]
	[RETURN RESULT	&returnResult]	
	[RESULT	&ResultType [OPTIONAL	&resultTypeOptional]]
	[ERRORS	&Errors]	
	[LINKED	&Linked]	
	[SYNCHRONOUS	&synchronous]	
	[IDEMPOTENT	&idempotent]	
	ALWAYS RESPONDS	&alwaysReturns]	
	<b>INVOKE PRIORITY</b>	&InvokePriority]	
	<b>[RESULT-PRIORITY</b>	&ResultPriority]	
	[CODE	&operationCode]	
}			
,			

Change the third module reference as follows (with the change underlined):

 $Remote-Operations-Useful-Definitions~\{joint-iso-itu-t\ remote-operations(4)\ useful-definitions(7)\ version \underline{2(1)}\}$ 

Change the no-op OPERATION definition by adding an additional field (underlined) as follows:

no-op OPERATION ::=	
{	
IDEMPOTENT	TRUE
ALWAYS RESPONDS	FALSE
CODE	local:-1
}	

#### ISO/IEC 13712-1: 1995/Amd.1: 1996 (E)

Add the following new items to this module:

```
probe OPERATION ::=
{
       ARGUMENT
                      SEQUENCE
           {
           invokeId
                     [0] InvokeId
           }
       RESULT
                      ENUMERATED{running(0), finished(1), unknown(2), ...}
       IDEMPOTENT TRUE
                      local:-2
       CODE
}
acknowledge OPERATION ::=
{
       ARGUMENT
                      InvokeId
       RESULT
                      ENUMERATED{acknowledged(0), unknown(1), ...}
       IDEMPOTENT TRUE
       CODE
                      local:-3
}
ProbeAndAcknowledge OPERATION ::= {probe | acknowledge}
cancel OPERATION ::=
ł
       ARGUMENT
                      InvokeId
                      {cancelFailed}
       ERRORS
       IDEMPOTENT TRUE
       CODE
                     local:-4
}
cancelFailed ERROR ::=
{
       PARAMETER
                             SET
       ł
                             [0] CancelProblem,
           problem
                             [1] InvokeId
           operation
       }
       CODE
                             local:-2
}
CancelProblem ::= ENUMERATED
               {unknownOperation(0), tooLate(1), operationNotCancellable(2), ...}
cancelled ERROR ::= {CODE local:-3}
```

## 10) Annex D

Make the following changes to the table (with the changes underlined):

Clause	Object Identifier Value
Annex A	{joint-iso-itu-t remote-operations(4) informationObjects(5) version <u>2(1)</u> }
	$\{joint-iso-itu-t\ remote-operations(4)\ useful-definitions(7)\ version\underline{2(1)}\}$
