RemoteUIClientDevice:1 Device Template Version 1.01

For UPnP[™] Version 1.0 Status: Standardized DCP Date: September 2, 2004

This Standardized DCP has been adopted as a Standardized DCP by the Steering Committee of the UPnPTM Forum, pursuant to Section 2.1(c)(ii) of the UPnPTM Forum Membership Agreement. UPnPTM Forum Members have rights and licenses defined by Section 3 of the UPnPTM Forum Membership Agreement to use and reproduce the Standardized DCP in UPnPTM Compliant Devices. All such use is subject to all of the provisions of the UPnPTM Forum Membership Agreement.

THE UPNP[™] FORUM TAKES NO POSITION AS TO WHETHER ANY INTELLECTUAL PROPERTY RIGHTS EXIST IN THE STANDARDIZED DCPS. THE STANDARDIZED DCPS ARE PROVIDED "AS IS" AND "WITH ALL FAULTS". THE UPNP[™] FORUM MAKES NO WARRANTIES, EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE STANDARDIZED DCPS, INCLUDING BUT NOT LIMITED TO ALL IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT AND FITNESS FOR A PARTICULAR PURPOSE, OF REASONABLE CARE OR WORKMANLIKE EFFORT, OR RESULTS OR OF LACK OF NEGLIGENCE.

Table 2: Device Requirements for stand-alone RemoteUIClientDevice	4
Table 3: Device Requirements for embedded RemoteUIClientDevice	5
Table 4: Defined permissions for RemoteUIClient Service	9

1. Overview and Scope

This device template is compliant with the UPnPTM Architecture, Version 1.0.

This document defines the device urn:schemas-upnp-org:device:RemoteUIClientDevice:1.

This device can be a UPnP root device, or embedded within a different device.

The RemoteUIClientDevice encapsulates all services for the Remote UI Client Device Control Protocol (DCP).

2. Device Definitions

2.1. Device Type

The following device type identifies a device that is compliant with this template:

urn:schemas-upnp-org:device:<u>RemoteUIClientDevice:1</u>

2.2. Device Model

It is recommended that *RemoteUIClientDevice* be implemented with support for securing UPnPTM actions. It is also recommended that securing of UPnPTM action is done using the *DeviceSecurity* service as defined by the UPnPTM security working committee. If implemented, the *DeviceSecurity* service must be contained either inside *RemoteUIClientDevice* implementation or in a device that encompasses the *RemoteUIClientDevice*. These two models are described below.

2.2.1. Description of Device Requirements

The following table briefly describes the services used in RemoteUIClientDevice.

Service Name	Service Description			
RemoteUIClient	Allows for basic operations on a Remote UI client including: user interface connection management, optionally user interface availability management and optionally basic user interaction.			
DeviceSecurity	Actions for taking ownership, configuring access control, establishing secure sessions, and invoking secure actions.			

Table 1: RemoteUIClientDevice Service Descriptions

2.2.1.1. DeviceSecurity within RemoteUIClientDevice

This model is typically applicable to physical devices that need *DeviceSecurity* functionality (including device ownership and access control) to be used only by the *RemoteUIClientDevice*. In this case, products that expose devices of the type **urn:schemas-upnp-org:device:** *<u><i>RemoteUIClientDevice:1*</u> must implement minimum version numbers of the required service specified in the table below.

Table 2: Device Requirements for stand-alone RemoteUIClientDevice

DeviceType	Root	Req. or Opt. ¹	ServiceType	Req. or Opt. ¹	Service ID ²
<u>RemoteUIClientDevice:1</u>	Yes	<u>R</u>	<u>RemoteUIClient:1</u>	<u>R</u>	<u>RemoteUIClient</u>
			<u>DeviceSecuirty:1</u>	<u>0</u>	<u>DeviceSecurity</u>
			Non-standard services embedded by an UPnP vendor go here.	X	To be defined by vendor

 $\overline{}^{1}$ R = Required, O = Optional, X = Non-standard.

² Prefixed by urn:<u>upnp-org</u>:<u>serviceId</u>: .

Relationship between Services

Figure 1 shows the logical structure of the device and services defined by the working group for UPnPTM technology enabled Remote UI clients.

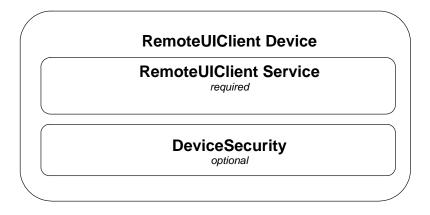

Figure 1: DeviceSecurity within RemoteUIClientDevice

2.2.1.2. DeviceSecurity outside RemoteUIClientDevice

This model is typically applicable to physical devices that implement Remote UI Client functionality, but the *RemoteUIClientDevice* may use *DeviceSecurity* that is already part of another device. An example of this would be where_urn:schemas-upnp-org:device: *RemoteUIClientDevice:1* is implemented inside a device of the type urn:schemas-upnp-org:device: *BasicDevice:1*. The *BasicDevice* in this case contains the *DeviceSecurity* service that may be used by another UPnPTM device e.g., *MediaRenderer*. The implementation of *RemoteUIClientDevice* must contain the minimum version number of the service specified in the table below.

Table 3: Device Requirements for embedded RemoteUIClientDevice

DeviceType	Root	Req. or Opt. ¹	ServiceType	Req. or Opt. ¹	Service ID ²
<u>RemoteUIClientDevice:1</u>	<u>Yes</u>	<u>R</u>	<u>RemoteUIClient:1</u>	<u>R</u>	<u>RemoteUIClient</u>
			Non-standard services embedded by an UPnP vendor go here.	X	To be defined by vendor

 $\overline{}^{1}$ R = Required, O = Optional, X = Non-standard.

² Prefixed by urn:<u>upnp-org</u>:<u>serviceId</u>: .

Relationships between Services

Figure 2 shows the logical structure of the device and services defined by the working group for UPnPTM technology enabled Remote UI clients that may use the *DeviceSecurity* service for other UPnPTM devices contained in the same physical device. *RemoteUIClient* service may be dependent on the *DeviceSecurity* service for providing access control to the actions defined in the services.

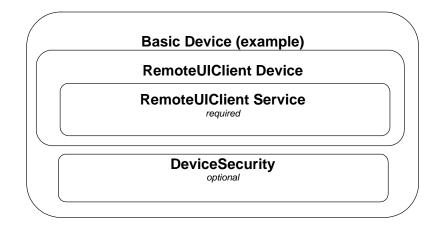

Figure 2: Example of DeviceSecurity outside RemoteUIClientDevice

2.2.2. Relationships Between Services

The dependencies between the services are listed in the above section under the possible models of implementing services in *RemoteUIClientDevice*.

2.3. Theory of Operation

A Remote UI client can be a fully autonomous device that runs its own user interface in addition to executing remoted UIs, or it may be a fully remoted device with no local UI capability. In both cases, the *RemoteUIClientDevice:1* UPnP device is implemented, allowing anyone on the network to discover and control the Remote UI client. Since many different types of user interaction device exist with many different form factors and usages, the behavior of the Remote UI client device may change.

In any case, it is highly recommended for the Remote UI client to employ the *DeviceSecurity* service to secure specific UPnPTM Remote UI client actions. This section assumes that the reader has an overall understanding of UPnPTM Security. Please refer to the *DeviceSecurity*:1 Service Control Specification for detailed description of a secure UPnPTM device.

2.3.1. Secure Remote UI Clients (if *DeviceSecurity* implemented in Remote UI client device)

RemoteUIClient service provides a set of actions to manage remote connections and process user's input data. The actions in this service that change the device state should be authenticated via UPnPTM Security. Some actions in *RemoteUIClient* service can carry critical information such as password in their argument field. By using *DecryptAndExecute* action defined in *DeviceSecurity* service, security sensitive information can be protected. A control point that accesses the secure actions on the service has to be initially authenticated via a Security Console application as described in UPnPTM Security DCP. Access control definitions such as Permissions, Profiles and Access Control List(ACL) for Remote UI client device are described in Appendix A.

3. XML Device Description

```
<?xml version="1.0" encoding="UTF-8"?>
<root xmlns="urn:schemas-upnp-org:device-1-0">
   <specVersion>
      <major>1</major>
      <minor>0</minor>
   </specVersion>
   <URLBase>base URL for all relative URLs</URLBase>
   <device>
      <deviceType>urn:schemas-upnp-org:device:RemoteUIClientDevice:1
</deviceType>
      <friendlyName>short user-friendly title</friendlyName>
      <manufacturer>manufacturer name</manufacturer>
      <manufacturerURL>URL to manufacturer site</manufacturerURL>
      <modelDescription>long user-friendly title</modelDescription>
      <modelName>model name</modelName>
      <modelNumber>model number</modelNumber>
      <modelURL>URL to model site</modelURL>
      <serialNumber>manufacturer's serial number</serialNumber>
      <UDN>uuid:UUID</UDN>
      <UPC>Universal Product Code</UPC>
      <iconList>
         <icon>
            <mimetype>image/format</mimetype>
            <width>horizontal pixels</width>
            <height>vertical pixels</height>
            <depth>color depth</depth>
            <url>URL to icon</url>
         </icon>
      </iconList>
      <serviceList>
         <service>
            <serviceType>urn:schemas-upnp-org:service:RemoteUIClient:1</serviceType>
            <serviceId>urn:upnp-org:serviceId:RemoteUIClient1</serviceId>
            <SCPDURL>URL to service description</SCPDURL>
            <controlURL>URL for control</controlURL>
            <eventSubURL>URL for eventing</eventSubURL>
         </service>
      </serviceList>
      <presentationURL>URL for presentation</presentationURL>
   </device>
</root>
```

4. Test

No semantic tests are defined for this device.

Appendix A: Access Control Definitions (if *DeviceSecurity* service is implemented)

This section specifies the Permissions, Profiles and Access Control List (ACL) entry to be implemented in the *DeviceSecurity* service that can optionally be used by the *RemoteUIClientDevice*. This is used by the Security Console to assign access control of secure actions on the Remote UI client device to control point applications. Please refer to the *DeviceSecurity1.0* service specification for more details about Security Console, Permissions, Profiles and ACLs.

A1 Permissions

The following table describes the permissions to perform access control to the secure actions of the services embedded in the Remote UI client device. The *RUICDeviceAll* is a required permission which can securely access all the actions in the *RemoteUIClient* service. The other permissions are optional. Vendors may define additional set of permissions to perform access control on the Remote UI client device. For example, they may provide separate master and guest permissions for finer granularity of access. However for maximum interoperability, vendors should use the optional permissions presented in this document rather than implementing their own security permissions.

Permission	Allowed Actions
RUICDeviceAll ¹	All actions in RemoteUIClient Service.
RUICDeviceInfo	GetCurrentConnections, GetDeviceProfile, GetUIListing
RUICDeviceChangeConnection	Connect, Disconnect
RUICDeviceChangeStatus	AddUIListing, RemoveUIListing, DisplayMessage, ProcessInput

Table 4: Defined permissions for RemoteUIClient Service

¹*RUICDeviceAll* must be implemented.

When implementing only the required RUICDeviceAll permission, the following XML format is used:

```
<Permission>

<UIname>RUICDeviceControl</UIname>

<ACLEntry>

<RUIWG:RUICDeviceAll/>

</ACLEntry>

<FullDescriptionURL></FullDescriptionURL>

<ShortDescription>

This permission allows the control point to set and get all secure actions

of all the services of the Remote UI client device.

</ShortDescription>
```

</Permission>

XML element tags UIname, ACLEntry, FullDescription, ShortDescription and Permission are defined in the *DeviceSecurity1*.0 service specification.

The above defined permission is returned by the Remote UI client device in the "DefinedPermissions" argument of *DeviceSecurity*'s GetDefinedPermission action

If the *DeviceSecurity* service resides **inside** the *RemoteUIClientDevice*, it will contain only the defined permissions of the Remote UI client device (as mentioned above). The "DefinedPermissions" argument of GetDefinedPermission action returned by the *DeviceSecurity* in this case would be:

If the *DeviceSecurity* service resides **outside** of the *RemoteUIClientDevice* and the *RemoteUIClientDevice* is embedded in a container device with other devices such as MediaRenderer, the "DefinedPermissions" argument of GetDefinedPermission action returned by the *DeviceSecurity* service in this case would be:

</DefinedPermissions>

A2 Profiles

There is no profile specified to be used for the Remote UI client device. However, vendors may define profiles of their own. Please refer to *DeviceSecurity*1.0 service specification for more details.

A3 Access Control List (ACL) entry

If DeviceSecurity service is implemented in the UPnPTM Remote UI client device, *RemoteUIClient* would have the "<RUIWG:RUICDeviceAll>" defined permission for access control. Following XML shows an example ACL entry granting this defined permission to the control point specified in the subject element. The string value

"dRDPBgZz..." under the <hash> tag denotes the public key hash of the control point for which this ACL is defined as an example.

```
<acl>
       <entry>
               <subject>
                       <hash>
                               <algorithm>SHA1</algorithm>
                               <value>dRDPBgZzTFq7Jl2Q2N/YNghcfj8=</value>
                       </hash>
               </subject>
               <access>
                       <RUIWG:RUICDeviceAll/>
               </access>
               <valid>
                       <not-before>2002-10-23_05:17:32</not-before>
                       <not-after>2004-12-31_23:59:59</not-after>
               </valid>
       </entry>
</acl>
```
